

Q1. Transaction with TRY-CATCH

Write a transaction that:

- Inserts a new match
 - Inserts related performance records
 - Uses TRY...CATCH to handle errors
 - Rolls back the transaction if any error occurs
-

Q2. Transfer Player Between Teams (Atomic Operation)

Write a transaction that:

- Updates a player's team
 - Update captain references for players who had this player as captain
 - Ensures all changes happen atomically (all succeed or all fail)
-

Q3. Conditional Multi-Step Transaction

Write a transaction that:

- Inserts a new match
 - Checks if both teams exist
 - Commits only if both teams exist, otherwise rolls back
-

Q4. Transaction with SAVEPOINT and Partial Rollback

Write a transaction that:

- Inserts a new tournament
 - Inserts multiple matches
 - Creates a savepoint after tournament insertion
 - Rolls back only the match insertions if any match has invalid teams
 - Commits the tournament
-

Q5. Transaction with Batch Salary Update and Validation

Write a transaction that:

- Updates salaries of all players in a given team by increasing them by 10%
 - After the update, checks the average salary of that team
 - Rolls back the transaction if the average salary exceeds 90000
 - Otherwise commits the transaction
-

Q6. Transaction with Aggregate Validation

Write a transaction that:

- Inserts performance records for a match
 - Checks total runs scored by all players
 - Rolls back if total runs exceed a specified limit (e.g., 500)
-

Q7. Nested Transactions with SAVEPOINT and Partial Rollback

Write a transaction that:

- Starts an outer transaction and inserts a new team
- Creates a savepoint
- Performs multiple player insertions for that team
- Rolls back only the player insertions using the savepoint if any player has invalid data (e.g., salary < 0)
- Commits the outer transaction

Verify that the team remains inserted while the invalid player insertions are undone.
