

Q1

The screenshot displays the SQL Server Enterprise Manager interface. The left pane shows the Object Explorer with the 'Hospital' database selected. The right pane shows the 'Solution Explorer' with a file named 'Solution.sql...ad Raza (90)'. The main window displays the SQL code for two queries, Q1 and Q2.

Q1:

```
-- Q1
-- Each LEFT JOIN goes one level up the superssn chain.
-- SUM counts how many of those levels actually exist (are not NULL).
CREATE VIEW v_ManagerDepth
AS
SELECT (d.fname + ' ' + d.lname) AS Doctor_Name, s.sname AS Specialization,
CASE WHEN s1.ssn IS NOT NULL THEN 1 ELSE 0 END +
CASE WHEN s2.ssn IS NOT NULL THEN 1 ELSE 0 END +
CASE WHEN s3.ssn IS NOT NULL THEN 1 ELSE 0 END AS Supervisors_Count
FROM doctor d JOIN specialization s
ON d.sno = s.snumber
LEFT JOIN doctor s1
ON d.superssn = s1.ssn
LEFT JOIN doctor s2
ON s1.superssn = s2.ssn
LEFT JOIN doctor s3
ON s2.superssn = s3.ssn
```

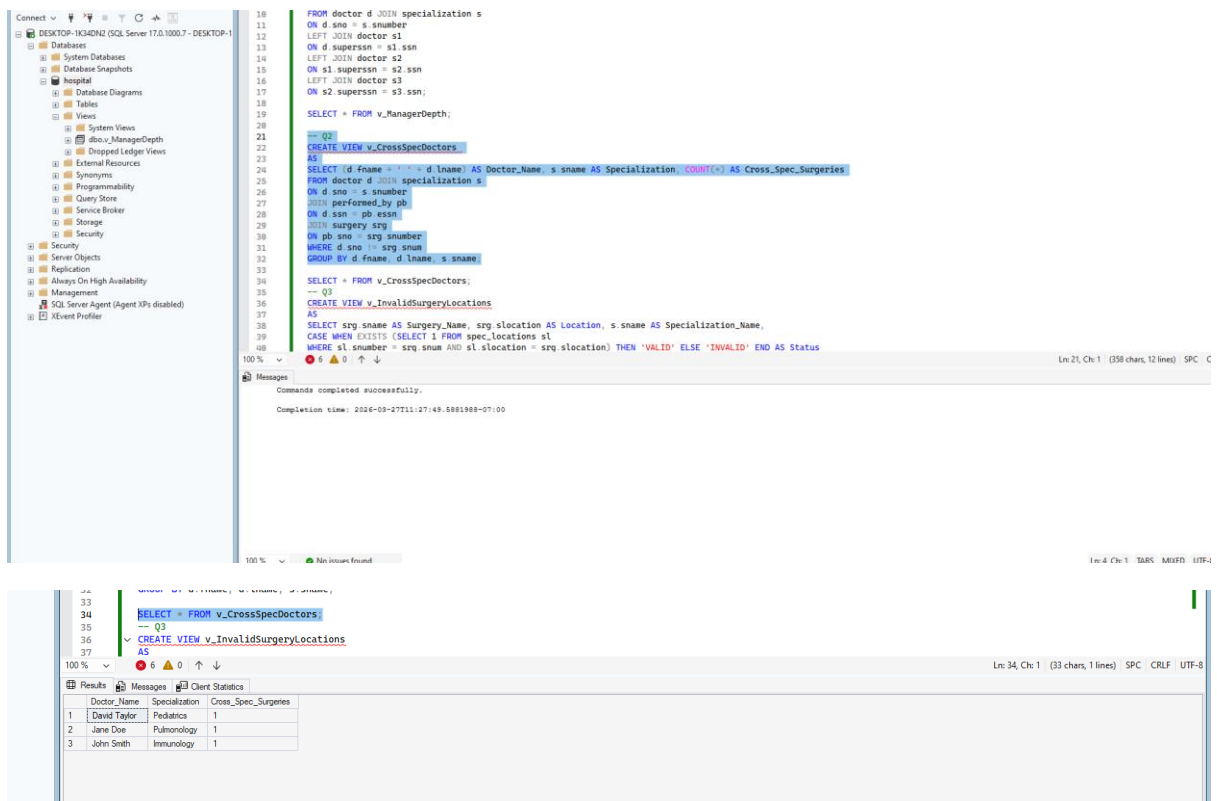

Q2:

```
CREATE VIEW v_CrossSpecDoctors
AS
SELECT (d.fname + ' ' + d.lname) AS Doctor_Name, s.sname AS Specialization, COUNT(*) AS Cross_Spec_Surgeries
FROM doctor d JOIN specialization s
ON d.sno = s.snumber
JOIN performed_by pb
ON d.ssn = pb.esn
JOIN surgery srg
ON pb.sno = srg.snumber
WHERE d.sno != srg.snum
GROUP BY d.fname, d.lname, s.sname;
```

The bottom pane shows the results of the query. The table has three columns: Doctor_Name, Specialization, and Supervisors_Count. The results are as follows:

Doctor_Name	Specialization	Supervisors_Count
1 Tom Holland	Pulmonology	2
2 John Smith	Immunology	0
3 Sara Wilson	Oncology	2
4 Lucy Miller	Orthopedics	2
5 Chris Davis	Orthopedics	2
6 Emily Jones	Cardiology	1
7 Olivia Moore	Psychiatry	3
8 Sophia Anderson	Dermatology	3
9 Michael Brown	Neurology	2
10 Ethan Thomas	Radiology	3
11 David Taylor	Pediatrics	3
12 Jane Doe	Pulmonology	1

Q2

The screenshot displays the SQL Server Enterprise Manager interface. The left pane shows the server hierarchy for 'DESKTOP-1K34DN2' (SQL Server 17.0.1000.7 - DESKTOP-1). The right pane shows a query window with the following T-SQL code:

```
10 FROM doctor d JOIN specialization s
11 ON d.sno = s.snumber
12 LEFT JOIN doctor s1
13 ON d.superssn = s1.ssn
14 LEFT JOIN doctor s2
15 ON s1.superssn = s2.ssn
16 LEFT JOIN doctor s3
17 ON s2.superssn = s3.ssn;
18
19 SELECT * FROM v_ManagerDepth;
20
21 -- Q2
22 CREATE VIEW v_CrossSpecDoctors
23 AS
24 SELECT (d.fname + ' ' + d.lname) AS Doctor_Name, s.sname AS Specialization, COUNT(*) AS Cross_Spec_Surgeries
25 FROM doctor d JOIN specialization s
26 ON d.sno = s.snumber
27 JOIN performed_by pb
28 ON d.ssn = pb.esno
29 JOIN surgery srg
30 ON pb.sno = srg.snumber
31 WHERE d.sno = srg.snum
32 GROUP BY d.fname, d.lname, s.sname;
33
34 SELECT * FROM v_CrossSpecDoctors;
35
36 -- Q3
37 CREATE VIEW v_InvalidSurgeryLocations
38 AS
39 SELECT srg.sname AS Surgery_Name, srg.slocation AS Location, s.sname AS Specialization_Name,
40 CASE WHEN EXISTS (SELECT 1 FROM spec_locations sl
41 WHERE sl.snumber = srg.snum AND sl.slocation = srg.slocation) THEN 'VALID' ELSE 'INVALID' END AS Status
```

The query window status bar indicates 'Ln: 21, Ch: 1 (358 chars, 12 lines) SPC C'. Below the query window, a message pane shows 'Commands completed successfully.' and 'Completion time: 2024-09-27T11:17:49.5881988+07:00'.

The bottom pane shows the 'Results' window with the following data:

Doctor_Name	Specialization	Cross_Spec_Surgeries
1 David Taylor	Pediatrics	1
2 Jane Doe	Pulmonology	1
3 John Smith	Immunology	1

Q5

The screenshot displays the SQL Server Enterprise Manager interface. On the left, the 'Hospital' database is expanded, showing various system views and user-defined views. The right pane contains a SQL script with the following content:

```

50 ON doctor mgr JOIN doctor sub
51 ON sub.superssn = mgr.ssn
52 LEFT JOIN performed_by pb
53 ON pb.essn = sub.ssn
54 GROUP BY mgr.ssn, mgr.fname, mgr.lname;
55
56 SELECT * FROM v_InvalidSurgeryLocations;
57
58 -- q5
59 CREATE VIEW v_DependencyBurden
60 AS
61 SELECT TOP 100 PERCENT -- because simple order by isn't allowed for views
62 (d.fname + ' ' + d.lname) AS Doctor_name, d.salary, COUNT(dp.dependent_name) AS No_of_Dependents
63 FROM doctor d JOIN dependent dp
64 ON d.ssn = dp.essn
65 GROUP BY d.fname, d.lname, d.salary
66 ORDER BY (CAST(COUNT(dp.dependent_name) AS FLOAT) / d.salary) DESC;
67
68 SELECT * FROM v_InvalidSurgeryLocations;
69
70 -- q6
71 CREATE PROCEDURE sp_ReassignToBalancedSpec
72 @ssn CHAR(9)
73 AS
74 BEGIN
75 DECLARE @sno INT;
76 DECLARE @mgrssn CHAR(9);
77
78 -- Find the specialization with the fewest doctors
79 SELECT TOP 1 @sno = d.sno
80 FROM doctor d

```

The bottom pane shows the execution results, indicating that the commands completed successfully. The completion time is 2026-08-27T11:33:19.8199222-07:00.

```

66 ORDER BY (CAST(COUNT(dp.dependent_name) AS FLOAT) / d.salary) DESC;
67
68 SELECT * FROM v_InvalidSurgeryLocations;
69
70 -- Q6
