

Q1. AFTER INSERT (Basic Logging)

Create an AFTER INSERT trigger on the player table that prints a message whenever a new player is added.

Q2. AFTER DELETE (Basic Logging)

Create an AFTER DELETE trigger on the team table that displays the name of the deleted team.

Q3. AFTER UPDATE (Column Change Detection)

Create an AFTER UPDATE trigger on the player table that prints a message if a player's salary is updated by more than 5000.

Q4. INSTEAD OF INSERT (Validation)

Create an INSTEAD OF INSERT trigger on the player table that prevents insertion if the player's age is less than 18.

Q5. AFTER INSERT (Derived Update)

Create an AFTER INSERT trigger on the performance table that updates a player's total runs and wickets in a separate column (add such a column in player).

Q6. AFTER DELETE (Referential Action Simulation)

Create an AFTER DELETE trigger on the team table that automatically deletes all players belonging to that team.

Q7. AFTER UPDATE (Conditional Logic)

Create an AFTER UPDATE trigger on the match table that prints a message if the winner of a match is changed.

Q8. INSTEAD OF DELETE (Restriction)

Create an INSTEAD OF DELETE trigger on the player table that prevents deletion of players who have match performance records.

Q9. AFTER INSERT (Multi-row Handling)

Create an AFTER INSERT trigger on the performance table that correctly handles multiple inserted rows and prints total runs added in that operation. (suppose multiple new rows are imported)

Q10. AFTER UPDATE (Audit Logging)

Create an AFTER UPDATE trigger on the player table that logs old salary, new salary, and player id into an audit table whenever salary is changed. (add a new audit_salary table for financial audit with appropriate columns)
